

# Build a Deck That Lasts a Lifetime

Your deck's structure is as important as your choice of decking material. A weak structure can very quickly diminish the beauty of your dream deck. With BAILEY TRUEDECK™, you can be assured that you have picked the most robust structure for your deck project.

BAILEY TRUEDECK™ is a steel-based deck framing system that provides a stable foundation for your decking material. Steel is much more durable than conventional pressure-treated wood. Unlike wood, steel does not warp, shrink and is insect and rot-resistant.

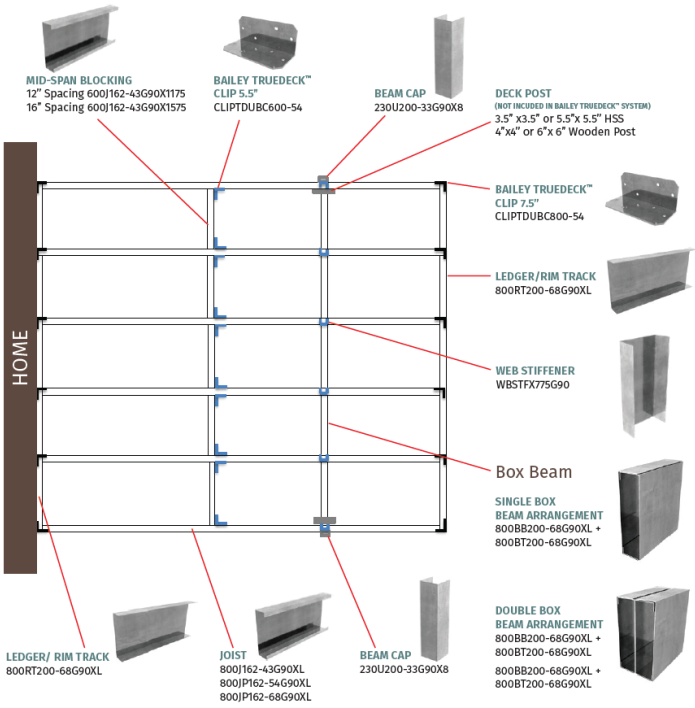

Over its lifetime, a deck is exposed to a variety of outdoor conditions and wooden deck structures often require maintenance which can quickly add up over time. BAILEY TRUEDECK™ not only stands against the elements but also helps you save in the long run.
